**COMMUNITY SERVICE PROJECT**

**TITLE OF THE PROJECT: INTERNET USAGE IN VILLAGES**

**BATCH NUMBER : A4**

## **ABSTRACT**

The internet has become an indispensable tool for communication, education, and economic activities worldwide. In recent years, there has been a significant push to extend internet access to rural and village areas, recognizing the potential to bridge socio-economic disparities and enhance the quality of life for residents in these regions. Villages, often characterized by limited access to resources and services, stand to benefit immensely from the digital revolution.

Despite the challenges, including infrastructural limitations, cost barriers, and digital literacy gaps, the increasing availability of mobile internet and government initiatives aimed at digital inclusion have brought connectivity to many rural areas. Mobile phones have emerged as the primary means of internet access, enabling villagers to tap into a range of online services that were previously inaccessible.
